Users' ideas & priorities for its  
future development

Theme	Vision for Users	Vision for Providers
<p>Vision elements</p>	<p>More utility in data</p> <p>We look to Govt to provide accuracy and objectivity - and provide guidance to its interpretation when needed</p> <p>We want data to help tell a story. 80% completeness is enough</p>	<p>Vision is as per stated</p> <p>The level of trust in data is high</p> <p>Data provision will drive efficiency &amp; accountability – we want to hear success stories of where data provision has driven this to create a virtuous spiral</p>
<p>Key data sets wishlists</p>	<p>Land registry – Property sales, council tax bands etc.</p> <p>National Address file</p> <p>Electoral Register made public, subject to individual privacy</p> <p>Key framework data – OS, boundary files etc.</p>	<p>Clear definitions of place are provided</p> <p>Comprehensive geographical hierarchies allowing ease of aggregation</p>
<p>What good outcomes might look like....steps to achieving vision</p>	<p>Govt helps take the much of the effort out of data exchange by providing geographical frameworks</p> <p>Users either</p> <p>i. Freer from shackles of expensive commercial packages</p> <p>or</p> <p>ii. VARs deliver better VFM. More insight/less data transformation/ reporting</p>	<p>Breakdown of data silos – linking of data</p> <p>Less defensiveness, more accepting of a transfer of power</p> <p>The “crowd” feeds back on how they would like the data to be made available</p> <p>Change of relationship between users &amp; providers – less defensive, more open, and more of a conversation</p>
